- TEAM PLAYER
- EAST ADAPTABLE
- DETAIL-ORIENTED
- DETERMINED
- PLAN-ORIENTED
- CREATIVE
- OPEN-MINDED
- PASSIONATE
- OPEN TO CHANGE
- CURIOUS
- RESOLUTE
- RESEARCHER

PROFILE INFO

Since my early childhood, I have held a strong fascination with electronic devices, but computers have always taken the lion's share of my interest. I have consistently found joy in repairing malfunctioning computers and breathing new life into outdated ones by modifying them. The deep bond I share with computers led me to pursue my undergraduate education in the field of computer engineering. To further position myself within the industry, I also want to obtain a bachelor's degree in business.

My favorite activity is problem-solving, and computers, with their intricate structures, present a delightful challenge in terms of troubleshooting. I take great satisfaction in identifying and resolving these issues, conducting research, and educating others on these matters. I am eager to use the internet as a tool to enhance my expertise in web and mobile technologies. If a subject exists online, I see no reason why I cannot conquer it. I completed my undergraduate education in English and am learning the German language to expand my access to resources and people.

In the near future, I aspire to establish my own entrepreneurial ventures, but before assuming leadership roles, my primary objective is to gain practical experience by immersing myself in the hands-on aspects of the field. I am driven to develop new software and technologies that will simplify people's lives, contributing to a brighter future.

SKILLS

	Ardunio		CSS 3		Java Script
	React Native		HTML 5		Photoshop
	Flutter		SQL		Python
	Hibernate		FIREBASE		Keras
	Java		BASH SCRIPTING		OpenCV
	Spring		MS OFFICE		Figma
	Language		TensorFlow	Always learning ...	

EXPERIENCED

	MIPS		Blender		Unreal Engine
	CUDA		KRITA		

ABOUT OF MY GRADUATION PROJECT

- My graduation project is a social communication application that allows people to communicate for blood sharing. Thanks to this application, people can share blood according to their location. The project was written in React native and firebase was used as instant database.
